Cadmium Anodes

Palm International's cadmium ball anodes are made of a special high purity grade of cadmium metal containing a minimum of 99.95% Cd. Melting and casting of the cadmium is carefully controlled to prevent the introduction of impurities. The balls are solid and clean, and do not have any flash or gates which would cause them to hang up in the basket.

Forms
Solid balls measuring 50.8 mm (2.0 in.) in diameter.

Typical Chemical Analysis (percent)
99.98% (99.95% minimum) by weight cadmium.

Antimony	<0.001	Silver	<0.0005
Arsenic	<0.0005	Tin	<0.0005
Copper	<0.0024	Thallium	<0.0001
Lead	<0.0048	Zinc	<0.007

Packaging
100 lb pails
