

Cadmium Anodes

Palm International's Cadmium Anode Balls are made from a special high purity grade of cadmium metal containing minimum of 99.94% Cd. Palm's Cadmium Anode Balls are designed for the surface finishing industry but have other industrial applications. Melting, casting, quality control standards and testing of the Cadmium Anode Balls are carefully controlled.

Store in a cool dry ventilated area away from foodstuffs. Keep container tightly closed.

Concentration

99.94 Percent Cadmium Metal - Cd

Appearance

Solid Ball Measuring 50.8 mm (2.0 in.) in Diameter

Contaminants

Measured in ppm.

Analysis:

Parameter	Specification
Cadmium	> 99.94%
Copper	< 50 ppm
Lead	< 250 ppm
Thallium	< 35 ppm
Zin	< 350 ppm

Packaging

100 lb Pail

Storage/Safety

Store and handle as a cadmium bearing material

Shelf Life

Indefinite
