

## Choline Hydroxide 45%

Palm Choline hydroxide solution is a phase transfer catalyst that can be used to carry hydroxide in organic systems and is therefore characterized as a strong base. There are number of uses for Choline Hydroxide including use in the electronics and printed circuit board industry as a photoresist stripper. Palm Choline Hydroxide 45% solution is stabilized to slow the shift to trimethylamine. Palm Choline Hydroxide 45% solution is supplied in 205 kg poly drums from stock.

### Appearance

Colorless to pale yellow liquid

### Odor

Strong, pungent amine smell

### Assay

45% minimum

### Specification:

TMA

1500 max

### CAS Number

123-41-1

### Packaging

205 kg poly drum
