

## Brass Nugget 1x1 Anodes

Palm International supplies electroplating grade 70/30 brass alloy anodes. Palm's Brass Nugget Anodes are produced from a high purity grade of alloy specifically designed for surface finishing applications such as decorative plating, wire plating and coinage. The nuggets are 1" extruded diameter cut to a length of 1" providing a uniform product with high packing density and good settling properties. These 1" X 1" Brass Nugget Anodes are made to demanding specifications and are subjected to stringent quality control standards and testing. Bars or Balls are available but must be special ordered with minimum quantities required.

Store away from foodstuffs in a closed container.

### Concentration

70 / 30% - Copper / Zinc

### Appearance / Form

1" X 1" Brass Nugget

### Contaminant

Measured in ppm

### Analysis:

| Parameter | Specification |
|-----------|---------------|
| Copper    | 68.5 - 71.5%  |
| Iron      | < 300 ppm     |
| Lead      | < 200 ppm     |
| Antimony  | < 200 ppm     |
| Arsenic   | < 200 ppm     |
| Nickel    | < 300 ppm     |
| Tin       | < 300 ppm     |
| Zinc      | 28.5 - 31.5%  |

### Shelf Life

Indefinite if kept in cool dry closed container.

### Packaging

44 lb Box

### Storage / Safety

Store away from foodstuffs.
