

## Zinc Ball Anodes

Palm International's Zinc Ball Anodes are made of a special high grade of zinc metal containing a minimum of 99.99% Zn. They are designed for use in the surface finishing industry. The zinc metal melting and casting are carefully controlled to prevent iron pickup and the introduction of other impurities. Palm's Zinc Ball Anodes are made to demanding specifications and are subjected to stringent quality control standards and testing.

Zinc Ball Anodes are produced to ISO Standard 752-1981 Special High Grade (SHG) specifications. Other applicable standards are ASTM B6, BS 3436 and DIN 1706.

Store in a cool dry area away from foodstuffs.

### Concentration

99.99% - Zn

### Appearance

Solid Balls - 2.0" Dia / 1 Lb

### Contamination

Measured in ppm

### Analysis:

Parameter	Typical
Aluminum	< 10 ppm
Cadmium	< 10 ppm
Copper	< 10 ppm
Iron	15 ppm
Lead	18 ppm
Tin	< 10 ppm

### Packaging

50 Lb Box

### Storage

Store in a cool dry area.

**Shelf Life** - Indefinite
